

WHEN YOU NEED TO BE SURE

Executive Summary
Toxicity testing report by SGS U.S Testing Company Inc. of
NJ USA 1998 .

A lengthy and extraordinarily comprehensive and expensive report of 90 pages, investigating with animals the oral, dermal, eye, acute dermal / corrosion, and inhalation toxicity of stabilised oxygen at high concentrations, regarded as “acute” with the result that the product is not considered to be toxic. The final comment was most notable, that there “ were general weight gain in most test animals”. It would be reasonable to surmise that test animals rarely fare so well when subjected to toxicity testing. Testing was done to U.S FDA standards.

If you would like to see the full 90 page report it is available from Oxy-Shot Pty Ltd
